Kollmorgen – Serving the Aerospace and Defense Industry

The Kollmorgen team provides aerospace and defense customers with high standards of quality, innovation and technology to improve a machine's performance and reliability. In addition, Altra Motion's global manufacturing footprint, rapid customization and prototyping capabilities drive quick lead times which empowers Kollmorgen's customers to commission their machines faster.

Kollmorgen also offers the aerospace and defense industry unparalleled depth and breadth of motion control product solutions through a worldwide service and support infrastructure made up of field service engineers and support teams that are available when and where customers need them.

Removing the Barriers of Design, Sourcing, and Time

At Kollmorgen, we know that OEM engineers can achieve a lot more when obstacles aren't in the way. So, we clear obstacles in three important ways:

Integrating Standard and Custom Products

The optimal solution is often not clear-cut. Our application expertise allows us to modify standard products or develop totally custom solutions across our whole product portfolio so that designs can take flight.

Providing Motion Solutions, Not Just Components

As companies reduce their supplier base and have less engineering manpower, they need a total system supplier with a wide range of integrated solutions. Kollmorgen offers complete solutions as well as motion subsystems that combine programming software, engineering services and best-in-class motion components.

Global Footprint

With direct sales, engineering support, manufacturing facilities, and distributors spanning the Americas, Europe, the Middle East, and Asia, we're close to OEMs worldwide. Our proximity helps speed delivery and lend support where and when they're needed.

Financial and Operational Stability

Kollmorgen is part of Altra Industrial Motion. A key driver in the growth of all Altra divisions is the Altra Business System, which relies on the principle of "kaizen" – or continuous improvement. Using world-class tools, cross-disciplinary teams of exceptional people evaluate processes and develop plans that result in superior performance.

EKM Servo Motor Introduction

Enhanced, High-Performance, Brushless AC Servo motors

EKM Series Motors are Mil-Spec 810E rated and IP67 sealed for duty in harsh environmental conditions.

- » Industry leading power and torque density
- » Meets IP67 sealing requirements and is 100% leak-tested housing for further moisture blocking
- » Ideal for most military specifications
- » C.O.T.S (commercial off the shelf) solution
- » Standard product offering with customization available

Features

Torque

Offers 0.43 to 53 N-m continuous stall torque (3.8 to 467 lb in).

Speed

Speeds up to 8000 rpm meet high speed application requirements while the windings can be specifically tailored to lower speeds as well.

Voltage

EKM Series Motors feature 480 Vac High Voltage Insulation.

Feedback

Rugged Resolver feedback can survive the most extreme environments.

Friction Torque

Low-cog, low harmonic distortion magnetic designs.

Connectivity

High performance nickel-plated MIL-C-38999 connectors with total environmental sealing, quick mating, triple lead threaded, self-locking coupling, as well as EMI and RFI shielding. In addition, both front-facing and rear-facing options are available.

Thermal

EKM Series Motors are rated for operation over a temperature range of -51°C to 54°C and feature 155°C (class F) insulation materials which include a thermistor.

Corrosion

Stainless steel shaft and fasteners prevent external corrosion while a chemical agent resistant paint allows resistance to harsh outdoor environments and chemicals.

Sealing

IP67 rated for ingress prevention and brief submergence as well as 100-psi wash down. In addition, a viton shaft seal comes standard.

Shock

Tested per MIL-STD-810E, Method 516.4, Procedure 1, 75g half sine wave pulses for 11 ms, 3 times in each axis (total of 18 shocks).

Vibration

Tested per MIL-STD-810E, Method 514.4, Procedure 1, Operational 0.01g²/Hz 5-30Hz, 0.02g²/Hz 75-500Hz, 0.006g²/Hz 900-2000 Hz.

Mounting

International Standard Mount available.

Additional motion control solutions are available with these options:

- » Fail-safe brakes
- » Shaft variations
- » Custom windings

Advanced Motor Design Features

The enhanced EKM motor series is Mil-Spec 810E rated, IP67 sealed, and comes standard with a stainless steel shaft and chemical-agent-resistant paint.

Note: The EKM Series is not CE compliant.

② Motor Parameters BEMF, Resistance, and Inductance measured at 25°C .

③ All data referenced to sinusoidal commutation.

④ Speed may be limited by Vbus.

⑤ Brake option reduces continuous torque by: EKM21 = 0.0 Nm, EKM22 = 0.01 Nm, EKM23 = 0.02 Nm, EKM24 = 0.05 Nm

⑥ Motor weight does not include brake option. EKM2 brake adds 0.27 kg (0.59 lb).

Notes:

① Motor Performance based on $\Delta T = 100^\circ\text{C}$ in a 40°C ambient (winding temp = 140°C) with listed Heat Sink.

② Motor Parameters BEMF, Resistance, and Inductance measured at 25°C .

③ All data referenced to sinusoidal commutation.

④ Speed may be limited by Vbus.

⑤ Brake option reduces continuous torque by: EKM51 = 0.15 Nm, EKM52 = 0.26 Nm, EKM53 = 0.35 Nm, EKM54 = 0.43 Nm

⑥ Motor weight does not include brake option. EKM5 brake adds 1.1 kg (2.42 lb).

L10 Bearing Fatigue and Shaft Loading

L10 Bearing Fatigue

L10 Bearing Fatigue

Shaft Loading

Motor	Max. Radial Force (N)	Max. Axial Force (N)
AKM1	48	200
AKM2	150	600
AKM3	340	600
AKM4	500	1400
AKM5	830	1740
AKM6	1940	2200
AKM7	2300	3000
AKM8	2752	4750

The maximum radial load ratings reflect the following assumptions:

1. Motors are operated with peak torque of the longest member of the frame size.
2. Fully reversed load applied to the end of the smallest diameter standard mounting shaft extension. Excluding AKM4X-EK which is rated at 240 N max. radial force.
3. Infinite life with 99% reliability.
4. Safety factor = 2.

EKM Motor Resolver Feedback

Phasing Diagram - All Motors

General notes:

1. When motor is rotated CW (viewed from drive shaft end), these waveforms result:
Voltage U, leads V, leads W. Voltage U-W leads Voltage V-W by 60° electrical.
2. PTC thermistor (155°C ± 5°C switching temperature) installed. Resistance at 25°C: ≤550 ohms. Switching Resistance: ≥1330 ohms within ±5°C of switch temperature.
3. Standard outline drawings showing mounting dimensions and standard winding information are available on our website at www.kollmorgen.com or by calling Kollmorgen Customer Support at 1-540-633-3545, or through email at support@kollmorgen.com.

Motor Winding Configuration

Operating Temperature	°C	-55° to 155°	-55° to 155°
Rotor Inertia Max.	kg cm ²	0.046	0.497

Resolver Winding Configuration

$$E_{R1-R2} = E \sin(\omega T)$$

$$E_{S1-S3} = K E_{R1-R2} \sin \theta$$

$$E_{S2-S4} = K E_{R1-R2} \cos \theta$$

Resolver Alignment

With positive DC current into phase W and out of phase V (U floats) the resolver is aligned to electrical ±5 counts. ie. Voltage S1-S3 set to null voltage S2-S4 max in phase with reference (R1-R2).

Failsafe, Holding Brake

The holding brake is designed to provide static holding torque to the motor shaft with the brake coil de-energized. The brake must first be released (coil energized) prior to commanding motor rotation as determined by its drop-out time. The brake is intended for holding or “parking” of a stationary motor. Not intended for dynamic braking. There should be absolutely no motion of the rotor when power is removed from the brake coil.

1. Operating Voltage: 24 Vdc +/- 10%.

2. Maximum backlash is calculated using worst-case tolerancing, and typical backlash is calculated using statistical tolerancing.
