ENGINEERING YOUR SUCCESS.

Parker Hannifin Corporation

Parker Hannifin is a Fortune 250 global leader in motion and control technologies. For more than a century the company has been enabling engineering breakthroughs that lead to a better tomorrow. Parker's engineering expertise and broad range of core technologies uniquely positions the company to help solve the world's greatest engineering challenges. We are the only manufacturer offering customers a choice of electromechanical, hydraulic, pneumatic, or computer-controlled motion systems.

Total System Solutions

Parker's team of highly qualified application engineers, product development engineers, and system specialists can turn pneumatic, structural, and electromechanical products into an integrated system solution.

Parker offers complete engineered systems.

Moreover, our Selectable Levels of Integration™ allows you to choose the appropriate system, subsystem, or component to meet your specific need.

First in Delivery, Distribution, and Support

In today's competitive, fast-moving economy, what good is an application that isn't ready on time? This is especially true when compressed design cycles make the quick delivery of critical components essential. With factories strategically located on five continents, Parker offers an unrivaled delivery record, getting solutions out our door and onto your floor faster than ever.

Parker also has the industry's largest global distribution network, with more than 8,600 distributors worldwide. Each of these locations maintains ample product inventory to keep your downtime to a minimum. And many distributors have in-house design capabilities to support your system and subsystem requirements.

Throughout the design process, Parker's factory-trained electromechanical engineers work hand in hand with you and day or night at 1-800-C-Parker.

Parker world headquarters in Cleveland

Our operators will connect you with a live, on-call representative who will identify replacement parts or services for all motion technologies.

Training

Parker's best-in-class technology training includes hands-on classes, Web-based instruction, and comprehensive texts for employees, distributors, and customers. Parker also provides computer-based training, presentations, exams, drafting and simulation software, and trainer stands.

parkermotion.com

Our award-winning Web site is your single source for:

- **Product information**
- **Downloadable catalogs**
- **Motion-sizing software**
- **3D design files**
- **Training materials**
- **Product-configuration software**
- **RFQ capabilities**
- **Videos and application stories**

24/7 Emergency Breakdown Support

The Parker product information center is available any time of the day or night at 1-800-C-Parker. Our operators will connect you with a live, on-call representative who will identify replacement parts or services for all motion technologies.

If you don't find exactly what you are looking for in this catalog, please contact us for information on other suitable Parker products or to have an application engineer discuss your requirements.

Visit our Website

Complete up-to-date technical assistance can be found on our web at www.parker.com/emn. This includes all the latest information on current products, new product introductions, local assistance and support, plus complete product catalog data, product configurators, performance charts and graphs, engineering data and calculations, CAD drawings, local service and support directory, application stories and videos.

Welcome!

Thank you for your interest in the products offered by the Parker Hannifin Electromechanical & Drives Division. This catalog presents Parker's electromechanical solutions for high-precision and high-speed automation. Our gearheads, motors, and integrated products are recognized around the world for their functionality, performance, and reliability.

Bayside pioneered the market for precision servo gearheads many years ago. Parker continues this tradition in quality and design with innovations like our Stealth Generation II Helical Planetary Gearhead, enhanced to provide superior performance for the most demanding applications. Our PV Series planetary gearhead combines power and versatility in an economical package. Our line of frameless motors and other integrated products provide an ideal solution for machine designs that require high performance in small spaces.

As you read through this catalog, you will discover that Parker offers the widest variety of electromechanical solutions that are delivered in the shortest amount of time. Still, many customers require special solutions to satisfy unique or special requirements. Parker has been providing custom engineered solutions for over 30 years to satisfy those requirements. If your application cannot be fulfilled by the complement of products found in this catalog, please contact an authorized Parker Automation Technology Center or a factory applications engineer.

Parker is proud to present these high precision products to you. We invite you to discover the advantages that can be realized by relying on Parker for products and systems which represent the very best value in the electromechanical marketplace.

Offer of Sale

WARNING

FAILURE OR IMPROPER SELECTION OR IMPROPER USE OF THE PRODUCTS AND/OR SYSTEMS DESCRIBED HEREIN OR RELATED ITEMS CAN CAUSE DEATH, PERSONAL INJURY AND PROPERTY DAMAGE.

This document and other information from Parker Hannifin Corporation, its subsidiaries and authorized distributors provide product and/or system options for further investigation by users having technical expertise. It is important that you analyze all aspects of your application and review the information concerning the product or system in the current product catalog. Due to the variety of operating conditions and applications for these products or systems, the user, through its own analysis and testing, is solely responsible for making the final selection of the products and systems and assuring that all performance, safety and warning requirements of the application are met.

The products described herein, including without limitation, product features, specifications, designs, availability and pricing, are subject to change by Parker Hannifin Corporation and its subsidiaries at any time without notice.

Product Overview

Planetary Gearheads

Our new Generation II Stealth® Series provides higher radial load, increased service life and ease of mounting than comparably sized planetary gearheads. The Stealth Generation II Helical Planetary Gearheads incorporate design enhancements to provide superior performance for the most demanding high performance applications. For larger frame sizes, Parker offers Generation I Stealth® Series gearheads in 142 to

220 mm and NEMA 56 frame sizes. For standard precision applications, the PV Series gearhead combines power and versatility in an economical package available in a wide range of options.

Product Series		Gear Geometry	Performance	Configuration	Frame Size	Nominal Continuous Torque Nm (in-lb)	Radial Load N (lbs)	Backlash arc-min	Page
Generation II Stealth®	PS	Helical Planetary	High Precision	In-Line	60 – 115 mm	27 – 230 (240 – 2047)	1650 – 7500 (370 – 1683)	8 – <3	12
	PX	Helical Planetary	Mid Precision	In-Line	60 – 115 mm NEMA 23 – 42	20 – 160 (178 – 1424)	1550 – 6800 (348 – 1526)	10 – <6	16
	RS	Helical Planetary/ Spiral Bevel	High Precision	Right Angle	60 – 115 mm	13 – 220 (115 – 1958)	1650 – 7500 (370 – 1683)	14 – <6	20
	RX	Helical Planetary/ Right Angle	Mid Precision	Right Angle	60 – 115 mm NEMA 23 – 42	10 – 136 (89 – 1210)	1550 – 6800 (348 – 1526)	20 – <12	24
Generation I Stealth®	PS	Helical Planetary	High Precision	In-Line	180 – 220 mm	294 – 1808 (2616 – 16,091)	7900 – 58,000 (1775 – 13,020)	8 – <3	30
	RS	Helical Planetary/ Spiral Bevel	High Precision	Right Angle	180 – 220 mm	141 – 1808 (1255 – 16,091)	7900 – 58,000 (1775 – 13,020)	10 – <4	34
	PV	Planetary	Standard	In-Line	40 – 115 mm NEMA 17 – 42	3.5 – 148 (31 – 1317)	190 – 10,555 (43 – 2370)	15 – <12	40

MultiDrive Gearheads

Stealth® MultiDrive (MD) offers three different output options for true flexibility. MultiDrive models include low-ratio, dual-shaft and hollow-shaft options in a compact, right angle package. With 5 frame sizes and multiple ratios to choose from, you are guaranteed to find a Stealth® MultiDrive to fit your servo motor application.

Product Series	Gear Geometry	Performance	Configuration	Frame Size	Continuous Torque Nm (in-lb)	Radial Load N (lbs)	Backlash arc-min	Page
RT	Helical	High Precision	Right Angle Hollow Shaft	90 – 220 mm	23 – 565 (204 – 5178)	2800 – 7500 (692 – 1685)	<14 – <6	48
RD	Helical	High Precision	Right Angle Double Shaft	90 – 220 mm	30 – 150 (266 – 1328)	2800 – 7500 (692 – 1685)	<14 – <6	48
RB	Helical	High Precision	Right Angle Low Ratio	90 – 220 mm	35 – 190 (266 – 1682)	2800 – 7500 (692 – 1685)	<14 – <6	48

Application Examples

Plastic Bottle Extrusion

The manufacturer of high-performance plastic extrusion equipment needed a drop-in replacement gearhead for an existing worm gearbox used with their motor without having to alter the design of their machine. The gearhead/motor combination is being used to drive the machine's rollers, controlling the speed at which the plastic is extruded into high-quality plastic sheets. The smoothness of the rollers is critical to the quality of the plastic sheets being produced.

Application Challenges:

High Transmission Error and Velocity Ripple

The customer used worm gearheads to control the rollers. Worm gears exhibit a sliding action of involute gears instead of a rolling action, contributing to the lack of smoothness of the machine rollers. Due to the high transmission error and velocity ripple from the worm drive, the rollers operated at differing speeds. This produced small lines and imperfections on the plastic sheets, rendering it unusable.

High Wear and Low Efficiency

The high level of rubbing (sliding action) between the worm and wheel teeth in the worm gearhead caused a high gear-tooth-wear rate and a lower efficiency (70%) than other major gear types.

Parker SOLUTION:

Stealth PS Gearhead and RT MultiDrive (hollow shaft) Gearhead were used in combination to provide the required 120:1 ratio. The result was high-quality plastics sheets that exceeded the customer's specifications.

The Stealth's all-helical planetary design (HeliCrown Gear Tooth) features extremely high gear tooth accuracy, minimizing transmission error and velocity ripple. The HeliCrown design features extremely high efficiency (95%) while minimizing tooth wear by providing a pure rolling action. Parker's Plasma Nitriding heat-treating process further heightens the gear tooth's wear resistance.

The MultiDrive gearhead features a space-saving bore (hollow shaft) option, eliminating compliance that occurs when coupling a gearhead shaft to the rollers being driven. This solution can be used for a variety of applications, including packaging, food, semiconductor, automotive and medical.

Food/Packaging Automation

A manufacturer of machines for gluing, fill, sealing and diverting food containers for the food-processing industry had a requirement for the motor and gearhead to be mounted above the food plane. Certain modifications were also needed for the gearhead to make it safe for the food environment, and capable to withstand frequent washdowns.

Gearhead Design Considerations:

- **Lubrication** – must be USDA food grade approved in case of incidental contact to food
- **Sealing** – must prevent any leaking as well as prevent any ingress of the fluid during washdown
- **Finish** – special FDA-approved finish must be used making it very durable and resistant to chipping, oxidizing or rusting

- **Output Shaft** – stainless steel prevents any rust from developing and contaminating the processing food.

Parker SOLUTION:

Stealth PS planetary gearhead with standard F01 food grade special option

Stealth PS planetary gearhead with standard food grade option provides the gearhead with standard modifications including special lubrication, viton seals, special finish and a stainless steel output shaft.

Since this food grade modification is a standard option, delivery is only one week over the standard gearhead lead time. (Note: Similar standard modifications exist for vacuum, clean room, high temperature and radiation.)

High-Speed Milling

High-speed milling machines are commonplace in industries such as aerospace and automotive because they allow large structural components to be machined from one piece rather than assembled from many smaller subcomponents. For a customer that manufactures high-speed milling machines, spindle heads are operating at speeds ranging from 18,000 to 40,000 RPM, so that the cutting is above the resonant frequency of the machine. Because of this, many characteristics become more critical than with their standard machines. The extremely large size of the spindle head also posed problems for the manufacturer in trying to keep it accurately positioned during the milling stage.

Application Challenge:

Low Stiffness

The spindle head was moved rotationally by 2 bull gears, driving a large ring gear. Because of the system characteristics, it was difficult to keep the spindle head absolutely stiff during the milling process. The problems associated with low stiffness are:

- **Poor surface finish**
- **Accuracy errors**
- **Excessive tool chatter**
- **Reduced tool life**

Parker SOLUTION:

Two Stealth® PS Helical Planetary Gearheads were used in tandem to create a stiff platform for the spindle machine head. One gearhead, acting as the master, and the other as the slave, were attached to the bull gears to simultaneously turn the ring gear that positioned the machine head. While the master gearhead moved the ring, the slave was taking up the backlash. In this way, the precision gears allowed for the spindle to be moved accurately, while the two gearhead combination maintained maximum system stiffness.

Parker's Stealth PS gearhead features an all-helical planetary gear design. Helical gears have a much higher tooth-contact ratio and greater face width than straight-spur gears, providing higher loads, smoother tooth engagement and quieter operation. The Stealth's HeliCrown Gear Tooth design provides extremely high gear tooth accuracy, while minimizing tooth wear. Parker Bayside's Plasma Nitriding heat-treating process further heightens the gear tooth's wear resistance.

This solution can also be used in the aerospace and automotive industries.

High-, Mid- and Standard-Precision Planetary Gearheads

Helical planetary technology is superb for low-backlash, high-stiffness and high-accuracy requirements, making the Parker Generation II Stealth® line of helical planetary gearheads ideal for these high- and medium-level performance applications. The introduction of the PV Series gearhead completes the Parker gear family by offering a standard-grade gearhead with the highest radial load capacity available today in a cost-effective solution. Whether you need high-, medium- or standard-grade performance, Parker can match the need. All Parker gearheads are proudly manufactured in the USA in our state-of-the-art facility which, displays the best use of Lean manufacturing practices. For more information go to parkermotion.com.

Generation II Stealth® PS/PX/RS/RX:

Our new Generation II Stealth® series provides higher radial load, increased service life and ease of mounting

The Generation II Stealth® Helical Planetary Gearheads incorporate design enhancements to provide superior performance for the most demanding high performance applications.

Stealth Generation II incorporates dual angular contact bearings providing higher radial load capacities while maintaining high input speeds. Design enhancements also include full complement needle bearings allowing for increased service life and extended warranties. Internal design changes and optimized gearing geometries allow for one oil fill level for any orientation, resulting in shortened part number designation and simplified order placement.

Universal mounting kits provide common mounting kits across multiple product lines to promote quicker deliveries and ease of mounting to any servo motor. Applications that require either high precision (PS/RS Series Gearheads) or mid-range precision (PX/

RX Series Gearheads) utilize the same mounting kit part numbers within the same frame size.

Mounting to any servo motor is as easy as A-B-C (adapter, bushing, collet).

Features & Benefits

- **Higher radial load capacity:** widely spaced angular contact output bearings
- **Increased service life:** full complement of planet needle bearings
- **Universal mounting kits:** quicker deliveries and easier mounting
- **High torque and low backlash:** helical planetary gearing
- **High stiffness:** Integral ring gear and rigid sun gear
- **Higher gear wear resistance:** plasma nitriding heat treating
- **PX models are optionally available with flange mounting for easy installation. (Contact factory for flange mount availability for RX models.)**

Other Planetary Gearheads:

Generation I Stealth® PS, PX and RS Gearheads

For larger frame sizes, Parker offers Generation I Stealth® Series gearheads in 142 to 220 mm and NEMA 56 frame sizes.

PV Series Precision Gearheads

The PV Series gearhead combines power and versatility in an economical package. It comes in a wide range of options including dimensional output face crossovers to the Parker Bayside PX, Alpha LP, Neugart PLE, Stoiber PE and standard NEMA gearheads.

Standard Options for Planetary Gearheads

Gearheads Ready to Mount to Linear Actuators

Most belt driven linear slides need a gearhead to reduce inertia. Parker has pre-engineered in-line and right-angle gearheads to mount directly to most popular linear slides, eliminating the need for couplings or adapters.

Input Shaft Speed Reducer/Speed Increaser for Increased Design Flexibility

Parker gearheads are available with an input-shaft option. The input-shaft option allows more design flexibility, as options like brakes, encoders, or safety couplings can be used between the motor and the gearhead. This option also allows you to operate the gearhead as a speed increaser.

Mil-Spec Gearheads

Parker has extensive experience in military and aerospace applications. The Stealth Bomber, M1 Tank and the Space Shuttle all use Parker gearheads. Parker's quality system has been approved by NASA and the US Government to MIL-I-45208A.

Special Environments

Put a Parker gearhead anywhere! Parker can supply gearheads to operate in the harshest environments:

Vacuum - Available as a standard option to 10^{-6} Torr vacuum ratings.

Clean Room - Special gearheads for Class 10,000 clean room applications.

High Temperature - Special lubricants and seals for temperatures up to 250° C.

Radiation - Gearheads customized to operate within radioactive environments.

Food Grade/Washdown - Gearheads customized to operate within food-handling and washdown environments.

Planetary Gearhead Selection Overview

Product Series	Gear Geometry	Performance	Configuration	Frame Size	Nominal Continuous Torque	Radial Load	Backlash arc-min	Page
					Nm (in-lb)	N (lbs)		
Generation II Stealth®	PS	Helical Planetary	High Precision	In-Line	60 – 115 mm 27 – 230 (240 – 2047)	1650 – 7500 (370 – 1683)	8 – <3	12
	PX	Helical Planetary	Mid Precision	In-Line	60 – 115 mm NEMA 23 – 42 20 – 160 (178 – 1424)	1550 – 6800 (348 – 1526)	10 – <6	16
	RS	Helical Planetary/ Spiral Bevel	High Precision	Right Angle	60 – 115 mm 13 – 220 (115 – 1958)	1650 – 7500 (370 – 1683)	14 – <6	20
	RX	Helical Planetary/ Right Angle	Mid Precision	Right Angle	60 – 115 mm NEMA 23 – 42 10 – 136 (89 – 1210)	1550 – 6800 (348 – 1526)	20 – <12	24
Generation I Stealth®	PS	Helical Planetary	High Precision	In-Line	180 – 220 mm 294 – 1808 (2616 – 16,091)	7900 – 58,000 (1775 – 13,020)	8 – <3	30
	RS	Helical Planetary/ Spiral Bevel	High Precision	Right Angle	180 – 220 mm 141 – 1808 (1255 – 16,091)	7900 – 58,000 (1775 – 13,020)	10 – <4	34
	PV	Planetary	Standard	In-Line	40 – 115 mm NEMA 17 – 42 3.5 – 148 (31 – 1317)	190 – 10,555 (43 – 2370)	15 – <12	38

Helical Planetary Gearhead Features

Parker planetary gearheads incorporate the latest technology enhancements...

- **Latest technology in seals to reduce heat and wear**
- **Oil lubrication reduces friction and operating temperature, increasing gear life**

Helical Planetary Design

Helical gears have more tooth contact and greater face width than spur gears. This results in higher loads, smoother tooth engagement, quieter operation and lower backlash.

HeliCrown®

Parker developed the HeliCrown gear tooth to further optimize Stealth's® performance. Since most vibration occurs at the entry and exit points of a gear tooth, HeliCrown eliminates metal only in these areas, without sacrificing gear strength, producing a quieter and stronger gear.

"The Helical Advantage"

Parker planetary gearheads are a superior design with construction integrity to deliver power, speed and accuracy – quietly and efficiently.

Power...	30% more torque than comparably sized gearheads
Speed...	up to 6,000 RPM input speeds
Accuracy...	Less than 3 arc-minutes backlash
Quiet...	Less than 68 dB noise
Efficiency...	Over 97% efficiency

Plasma Nitriding

Parker's in-house Plasma Nitriding process results in an ideal gear tooth. The surface is very hard (65 Rc) and the core is strong, but flexible (36 Rc). The result is a wear-resistant gear tooth that can withstand heavy shock, ensuring high accuracy for the life of the gearhead.

ServoMount®

Parker's ServoMount design features a balanced input gear supported by a floating bearing. This unique design compensates for motor shaft runout and misalignment, ensuring TRUE alignment of the input sun gear with the planetary section and allowing input speeds up to 6,000 RPM. ServoMount ensures error-free installation to any motor, in a matter of minutes.

Parker Stealth® planetary gearhead features

Features unique to Generation II Stealth® gearheads

- **Widely spaced angular contact bearings** provide higher radial load capacity
- **Full compliment of needle bearings** for increased service life
- **Universal mounting kits** offer easier mounting and quick delivery

Common features for all Generation I & II Stealth® gearheads

- ① **Helical Planetary** – Provides smooth, quiet operation, high torque and high accuracy.
- ② **ServoMount®** – Motor-mounting design ensures error-free installation and the balanced pinion allows higher input speeds.
- ③ **Precision Bearings** – Provide high speed and high radial and axial load capacity.
- ④ **HeliCrown®** – Parker's proprietary gear tooth geometry ensures quieter operation and higher loads than conventional gears.
- ⑤ **Sealed Unit** – Viton seals and O-Rings provide IP65 protection to prevent leaks and protect against harsh environments.
- ⑥ **Integral Ring Gear** – Cutting the ring gear directly into the housing allows for larger bearing and planet gears, delivering maximum power and stiffness in a minimum package.

Features unique to Stealth® right-angle gearheads

- ⑦ **Spiral Bevel Gears** – Deliver high efficiency and high torque in a compact, right angle package.
- ⑧ **Compact Design** – Package size is the same regardless of ratio.

Space Tight? Turn Right

For space constrained applications, Parker's RS and RX right-angle gearheads offer as much as a 2X space savings compared to in-line products.

1) At nominal speed $N_{nom\ r}$.

2) Parker MotionSizer sizing software available for free download at parkermotion.com.

3) Maximum of 1000 stops.

4) For intermittent operation.

5) Max radial load applied to the center of the shaft at 100 rpm.

6) Max axial load at 100 rpm.

7) For combined radial and axial load consult factory.

8) Measured at 2% of rated torque.

9) Measure at 1m.

PS Generation II Output Shaft Load Rating

Formulas below graphs are used to calculate radial load (P_{rx}) at any distance "X" from the gearhead mounting surface:

$$P_{rx} = P_r * 75 \text{ mm} / (49 + X)$$

$$P_{rx} = P_r * 2.95 \text{ in} / (1.93 \text{ in} + X)$$

$$P_{rx} = P_r * 124 \text{ mm} / (81 + X)$$

$$P_{rx} = P_r * 4.88 \text{ in} / (3.19 \text{ in} + X)$$

$$P_{rx} = P_r * 96 \text{ mm} / (62 + X)$$

$$P_{rx} = P_r * 3.78 \text{ in} / (2.44 \text{ in} + X)$$

$$P_{rx} = P_r * 156 \text{ mm} / (93 + X)$$

$$P_{rx} = P_r * 6.14 \text{ in} / (3.66 \text{ in} + X)$$

* Radial load applied to center of the shaft.

1) At nominal speed $N_{nom\ r}$.

2) Parker MotionSizer sizing software available for free download at parker-motion.com.

3) Maximum of 1000 stops.

4) For intermittent operation.

5) Max radial load applied to the center of the shaft at 100 rpm.

6) Max axial load at 100 rpm.

7) For combined radial and axial load consult factory.

8) Measured at 2% of rated torque.

9) Measure at 1m.

PX Generation II Output Shaft Load Rating

PX60 / PX23

Formulas to calculate radial load (Pr_x) at any distance "X" from the gearhead mounting surface:

$$Pr_x = Pr * 78 \text{ mm} / (63 + X)$$

$$Pr_x = Pr * 3.07 \text{ in} / (2.48 \text{ in} + X)$$

PX90 / PX34

$$Pr_x = Pr * 95 \text{ mm} / (73 + X)$$

$$Pr_x = Pr * 3.74 \text{ in} / (2.87 \text{ in} + X)$$

PX115 / PX42

$$Pr_x = Pr * 115 \text{ mm} / (73 + X)$$

$$Pr_x = Pr * 4.53 \text{ in} / (3.43 \text{ in} + X)$$

* Radial load applied to center of the shaft.

1) At nominal speed $N_{nom r}$.

2) Parker MotionSizer sizing software available for free download at parkermotion.com.

3) Maximum of 1000 stops.

4) For intermittent operation.

5) Max radial load applied to the center of the shaft at 100 rpm.

6) Max axial load at 100 rpm.

7) For combined radial and axial load consult factory.

8) Measured at 2% of rated torque.

9) Measure at 1m.

RS Generation II Output Shaft Load Rating

Formulas below graphs are used to calculate radial load (Prx) at any distance "X" from the gearhead mounting surface:

$$Prx = Pr * 75 \text{ mm} / (49 + X)$$

$$Prx = Pr * 2.95 \text{ in} / (1.93 \text{ in} + X)$$

$$Prx = Pr * 124 \text{ mm} / (81 + X)$$

$$Prx = Pr * 4.88 \text{ in} / (3.19 \text{ in} + X)$$

$$Prx = Pr * 96 \text{ mm} / (62 + X)$$

$$Prx = Pr * 3.78 \text{ in} / (2.44 \text{ in} + X)$$

$$Prx = Pr * 156 \text{ mm} / (93 + X)$$

$$Prx = Pr * 6.14 \text{ in} / (3.66 \text{ in} + X)$$

* Radial load applied to center of the shaft.

1) At nominal speed $N_{nom r}$.

2) Parker MotionSizer sizing software available for free download at parker-motion.com.

3) Maximum of 1000 stops.

4) For intermittent operation.

5) Max radial load applied to the center of the shaft at 100 rpm.

6) Max axial load at 100 rpm.

7) For combined radial and axial load consult factory.

8) Measured at 2% of rated torque.

9) Measure at 1m.

RX Generation II Output Shaft Load Rating

RX60 / RX23

Formulas to calculate radial load (Prx) at any distance "X" from the gearhead mounting surface:

$$Prx = Pr * 78 \text{ mm} / (63 + X)$$

$$Prx = Pr * 3.07 \text{ in} / (2.48 \text{ in} + X)$$

RX90 / RX34

$$Prx = Pr * 95 \text{ mm} / (73 + X)$$

$$Prx = Pr * 3.74 \text{ in} / (2.87 \text{ in} + X)$$

RX115 / RX42

$$Prx = Pr * 115 \text{ mm} / (73 + X)$$

$$Prx = Pr * 4.53 \text{ in} / (3.43 \text{ in} + X)$$

* Radial load applied to center of the shaft.

Generation II Stealth® Series

Generation II Stealth® How to Order

Choose gearhead series, frame size, ratio, backlash and specify motor, make and model for mounting kit from the charts below and on the following page.

Sizing/Selection Design Assistance

To properly size and select a gearhead for a specific application requires consideration of several interrelated parameters including: speed, continuous torque, repetitive peak torque or acceleration torque, emergency stop torque, duty cycle, ambient temperature and radial and axial shaft load.

The 9 step procedure on pages 60-61 provides a straightforward method of selecting the correct gearhead for your application.

Gearhead Ordering Information

Order Example:					
	PS	60	-	003	- XXX - S 2
①	②	③		④	⑤ ⑥
Series	Frame Size	Ratio	Special Options*	Backlash	GEN 2 Identifier
PS	60, 90, 115, 142	003, 004, 005, 007, 010, 015, 020, 025, 030, 040, 050, 070, 100	XXX = Factory issued	S = Standard L = Low	2
PX	60, 90, 115, 23, 34, 42	003, 004, 005, 007, 010, 015, 020, 025, 030, 040, 050, 070, 100	XXX = Factory issued T01 = Flange Mount		
RS	60, 90, 115, 142	005, 010, 015, 020, 025, 030, 040, 050, 100	XXX = Factory issued		
RX	60, 90, 115, 23, 34, 42	005, 010, 015, 020, 025, 030, 040, 050, 100	XXX = Factory issued (Contact factory for Flange Mount Option)		

* Standard special options include: F01 Food Grade, W01 Washdown, G01 GenI Spacer Plate, L02 No lubricant (standard is oil filled), V01 Vacuum, C01 CleanRoom Class 10,000. Leave blank if no special option required.

Motor Mounting How to Order

Know your motor and need our mounting kit part number? Use the charts below or use our Motor Mounting Search Tool on our website at:

PS Output Shaft Load Rating

Formulas to calculate radial load (Prx) at any distance "X" from the gearhead mounting surface:

$$Prx = Pr * 138 \text{ mm} / (76 + X)$$

$$Prx = Pr * 5.43 \text{ in} / (2.99 \text{ in} + X)$$

$$Prx = Pr * 190 \text{ mm} / (106 + X)$$

$$Prx = Pr * 7.48 \text{ in} / (4.17 \text{ in} + X)$$

* Radial load applied to center of the shaft.

Sizing/Selection Design Assistance

To properly size and select a gearhead for a specific application requires consideration of several interrelated parameters including: speed, continuous torque, repetitive peak torque or acceleration torque, emergency stop torque, duty cycle, ambient temperature and radial and axial shaft load.

The 9 step procedure on pages 60-61 provides a straightforward method of selecting the correct gearhead for your application.

Right Angle Gearhead Orientation

PV Series Gearheads

PV Series: Value Alternative Precision Planetary Gearheads

PV = Power + Versatility

The PV Series planetary gearhead combines power and versatility in an economical package. It comes in a wide range of options, including dimensional output face crossovers to the Parker PX, Alpha LP, Neugart PLE, Stober PE and standard NEMA gearheads.

The PV Series is available in metric or NEMA frame sizes: 40, 60, 90 and 115 mm, and NEMA sizes 17, 23, 34 and 42. Ratios are available from 3:1 to 100:1.

Whether you're an OEM or an end user searching for competitive alternatives, the PV offers a superior solution. Parker's PV Series gearheads are made in the USA.

- **Higher radial load capacity:** Taper roller output bearings
- **Competitive Alternatives:** Five Drop-In Output Face Options
- **Universal mounting kits:** Quicker deliveries and easier mounting
- **Higher gear wear resistance:** Plasma Nitriding heat treating

PV Series Precision Gearheads

Product Series	Gear Geometry	Configuration	Frame Size (mm)	Nominal Continuous Torque (Nm)	Radial Load (N)	Backlash arc-min	IP Rating
PV40/17	Planetary	In-Line	40 (NEMA 17)	3.5 – 6.7	190 – 590	<15	IP64

** @100 rpm, radial load applied at center of shaft

PV Series Gearheads

Output Shaft Load Ratings – PV40/PV17 & PV60/PV23

See How to Order page 46, items 3 & 4 for front face/output face code definitions.

- 1) Maximum axial load, F_a .
- 2) Maximum radial load applied to the center of the shaft, F_r .
- 3) Radial load curves can be used to combine (radial + axial) load if $F_a/F_r < 0.22$.
- 4) If $F_a/F_r > 0.22$ consult factory.

Output Shaft Load Ratings – PV90/PV34 & PV115/PV42

See How to Order page 46, items 3 & 4 for front face/output face code definitions.

- 1) Maximum axial load, F_a .
- 2) Maximum radial load applied to the center of the shaft, F_r .
- 3) Radial load curves can be used to combine (radial + axial) load if $F_a/F_r < 0.22$.
- 4) If $F_a/F_r > 0.22$ consult factory.

PV Series Gearheads

How to Order

Use the tables below to configure your PV gearhead and motor mounting kit part number.

	①	②	③	④	⑤
Order Example:	PV	40	T	N	- 004

Sizing/Selection Design Assistance

To properly size and select a gearhead for a specific application requires consideration of several interrelated parameters including: speed, continuous torque, repetitive peak torque or acceleration torque, emergency stop torque, duty cycle, ambient temperature and radial and axial shaft load.

The 9 step procedure on pages 60-61 provides a straightforward method of selecting the correct gearhead for your application.

①	②		③		④		⑤

Mounting Kit Ordering Information

Know your motor and need our mounting kit part number? Use the charts below or use our Motor Mounting Search Tool on our website at:

www.parkermotion.com

			⑥	⑦	⑧
Order Example:			MV	60	XXX
			⑥	⑦	⑧
Series	Frame Size		Factory Assigned		
MV (Mounting kit for PV)	40	40 or 17	XXX	See Motor Mounting Search Tool on parkermotion.com or consult factory for part number	
	60	60 or 23			
	90	90 or 34			
	115	115 or 42			

Mounting Kit Adapter Length*

Frame Size	Motor Shaft Length		“AD”	
	mm	(in)	mm	(in)
40/17	12 – 20	(0.472 – 0.787)	13.7	(0.539)
	20.1 – 25.4	(0.791 – 1.000)	19.0	(0.748)
60/23	16 – 25.4	(0.630 – 1.000)	16.5	(0.650)
	25.4 – 31.8	(1.004 – 1.252)	22.5	(0.886)
90/34	20 – 31.8	(0.787 – 1.252)	20.0	(0.787)
	31.9 – 40	(1.256 – 1.575)	28.5	(1.122)
115/42	22 – 40	(0.866 – 1.575)	24.0	(0.945)
	40.1 – 51	(1.579 – 2.008)	35.0	(1.378)

* Adapter length may vary depending on motor make and model.

Stealth® MultiDrive Gearheads

Stealth® MultiDrive Series:

The Flexible Right Angle Gearhead Solution

Stealth® MultiDrive (MD) offers three different output options for true flexibility. MultiDrive models include low-ratio, dual-shaft and hollow-shaft options in a compact, right angle package. MultiDrive gearheads features Stealth helical gearing for high torque, high accuracy and quiet operation. With five frame sizes and multiple ratios to choose from, you are sure to find a Stealth MultiDrive to fit your servo motor application.

- **Space Saving: Compact, right-angle design saves space in many applications**
- **Low Backlash: Standard as low as 8 arc-minutes and 4 arc-minutes optional**
- **Smooth, Quiet Operation and Long Life: Hardened, precision spiral bevel gears ensure quiet operation**
- **Quick, Error-Free Mounting to any servo or stepper motor using Parker's ServoMount® design**
- **Sealed Unit: Seals and O-rings provide IP65 protection to prevent leaks and to protect against harsh environments**

MultiDrive RT, RD and RB Series Precision Gearheads

Product Series	Configuration	Ratios	Gear Geometry	Performance	Frame Size (mm)	Continuous Torque Nm (in-lb)	Radial Load N (lbs)	Backlash arc-min

Stealth® MultiDrive Gearheads

MultiDrive RT/RD/RB Output Shaft Load Rating

RT90/RD90/RB90

Formulas to calculate radial load (Prx) at any distance "X" from the gearhead mounting surface:

$$Prx = Pr * 121 \text{ mm} / (100 \text{ mm} + X)$$

$$Prx = Pr * 4.76 \text{ in} / (3.94 \text{ in} + X)$$

RT115/RD115/RB115

$$Prx = Pr * 151 \text{ mm} / (125 + X)$$

$$Prx = Pr * 5.94 \text{ in} / (4.92 \text{ in} + X)$$

RT142/RD142/RB142

$$Prx = Pr * 201 \text{ mm} / (160 + X)$$

$$Prx = Pr * 7.91 \text{ in} / (6.30 \text{ in} + X)$$

MultiDrive RT/RD/RB Output Shaft Load Rating

RT180/RD180/RB180

Formulas to calculate radial load (Prx) at any distance "X" from the gearhead mounting surface:

$$\text{Prx} = \text{Pr} * 260 \text{ mm} / (208 \text{ mm} + X)$$

$$\text{Prx} = \text{Pr} * 10.24 \text{ in} / (8.19 \text{ in} + X)$$

RT220/RD220/RB220

$$\text{Prx} = \text{Pr} * 352 \text{ mm} / (267 + X)$$

$$\text{Prx} = \text{Pr} * 13.86 \text{ in} / (10.5 \text{ in} + X)$$

Inertia

All moment of inertia values are as reflected at the input of the gearhead

Stealth® MultiDrive How to Order

Choose gearhead series, frame size, ratio, backlash and orientation from the chart below.

Gearhead Ordering Information

Order Example:					
	RD	142	E	003	- XXX LB
①	②	③	④	⑤	
Series	Frame Size (mm)	Encoder	Ratio	Special	Backlash
RB Low Ratio	090 115 142 180 220	—	001, 002, 003	Factory Assigned (Only if needed)	Blank = Standard LB = Low
RD Dual Shaft	090 115 142 180 220	E	001, 002, 003, 009, 015, 021, 030		
RT Hollow Shaft	090 115 142 180 220	—	003, 009, 015, 021, 030		

Mounting Kit Ordering Information

For 1:1, 2:1 and 3:1 ratios, mounting kit is: MD (frame size)-ratio-xxx. For example MD90-001

For 9:1 or higher, , mounting kit is: MT (frame size)-ratio-xxx. For example MD90-021

Parker MotionSizer sizing software available for free download at: www.parkermotion.com

Sizing/Selection Design Assistance

To properly size and select a gearhead for a specific application requires consideration of several interrelated parameters including: speed, continuous torque, repetitive peak torque or acceleration torque, emergency stop torque, duty cycle, ambient temperature and radial and axial shaft load.

The 9 step procedure on pages 60-61 provides a straightforward method of selecting the correct gearhead for your application.

Related Products from Parker

K Series Frameless Kit Motors

Frameless kit motors are the ideal solution for machine designs that require high performance in small spaces. Kit motors are directly integrated with the drive train, resulting in a smaller, more reliable motor package.

Direct drive motion construction also gives equipment designers the advantages of lower costs, increased reliability and improved performance.

When to Use

- **A significant cost savings**
- **Reduced mechanical complexity**
- **Greater design flexibility**
- **High performance in a compact package**
- **Improved dynamic response and settling**
- **Minimum motor size per application space**
- **Low cogging for smooth operation**
- **Low inertia for high acceleration**

Features

- **High peak torque up to 93.37 Nm (826.4 in-lb)**
- **High speeds up to 50,000 RPM**
- **Superior performance – high stiffness and better response**
- **High reliability – no mechanical couplings**
- **Compact design – minimizes product size**
- **Low cogging - special orientation of the laminations and odd slot count**
- **Very low torque ripple at low speeds for smooth and precise rotary motion**

MPP/MPJ Series Rotary Servo Motors

The MaxPlusPlus (MPP) family of brushless servo motors is redefining performance, flexibility, and reliability. The industry's highest-performing servo motor uses eight-pole segmented lamination technology, which produces more torque in a shorter package. Use MaxPlusPlus motors for higher torque applications, customization options, or when high performance is required.

When higher inertia is desired to improve system performance, the MPJ is the perfect choice. It includes all the same features and benefits of the MPP, but increases the rotor inertia by 3 to 8 times over the standard MPP.

- **MPP – 92 to 270 mm frame sizes**
- **MPJ – 92 to 142 mm frame sizes**
- **1.5 to 158 Nm (13 to 1398 in-lb) continuous stall torque**
- **4.3 to 402 Nm (38.1 to 3558 in-lb) peak torque**
- **Very high torque-to-inertia ratio**
- **Right-angle rotatable connectors**
- **Seven different feedback devices including encoder, serial encoder, resolver, Heidenhain and Stegmann single and multi-turn absolute encoders**
- **IP64 standard, IP65 optional**
- **Special shaft, front flange, and feedback devices available**
- **CE and UL**

RD Series Direct Drive Servo Rotary Positioners

Parker direct drive rotary stages feature a robust construction and high performance in a compact package, providing smooth, near frictionless motion with zero backlash.

Featuring an integral brushless DC servo motor, these rotary stages offer several distinct advantages over traditional worm gear-driven stages. The elimination of the worm gearing offers the ability to reduce wear with zero backlash while exhibiting near frictionless motion.

The RD's high positioning accuracy, solely based on the stage's encoder, provides repeatability within 2 encoder counts, with resolutions down to 1.4 arc-seconds. The RD Direct Drive features speeds up to 700 RPM with significant torque capability.

- **Robust bearing design for high load capacity**
- **Integrated brushless motor features high copper slot fill and rare earth magnets for maximum torque efficiency**
- **In-line rotary encoder for direct position feedback. Also includes once per rev index mark**
- **Aluminum or stainless steel precision ground top plate for accurate mounting**
- **Motor rotor and top plate shaft as one-piece construction for high stiffness**
- **Sub "D" connectors for "plug & play" operation and simple connectivity**

Compax3 Servo Drives & Drive/Controllers

With its high performance and modular design, the Compax3 family of industrial servo drives and drive/controllers offers a new level of servo performance and flexibility.

Enhanced by the IEC 61131-3 programming environment, the modular structure of the Compax3

family allows options such as intelligent motion controllers, fieldbus interfaces and industry standard motor feedback.

Available in single- or multi-axis configurations, with numerous expansion options, all models are rated for 120 - 480 VAC input, continuous current output from 2.5 A (rms) to 155 A (rms), and are CE (EMC & LVD) and UL compliant.

Compax3 Drive

- **5V/24V step/direction and $\pm 10V$ analog command**
- **Resolver, encoder or high-resolution SinCos® Hiperface™ and Endat 2.1**
- **Torque, velocity or position control modes**
- **Encoder tracking capability**

Compax3 Drive/Controller

- **Available as:**
 - servo positioning
 - programmable positioning with function modules according to PLCopen
 - advanced programmable positioning with electronic camming, gearing, etc.
- **Certified safety technology integrated into drive (EN954-1 Category 3)**
- **Fieldbus options:** DeviceNet, Profibus, CANopen, ETHERNET Powerlink and RS232
- **Supports all five IEC 61131-3 programming languages and continuous flow chart**
- **Resolver, encoder or high-resolution Sin/Cos®, Hiperface™, Endat 2.1 and SSI feedback devices**

HPLA/HLE Series Industrial Belt-Driven Positioners

The HLE/HPLA linear modules are ideal as single-axis products or as components for high-speed multi-axis gantries. With thousands of units in operation worldwide, the HPLA/HLE Series are proven performers offering long life and with trouble-free operation.

With flexible design options for bearing selection, profile size, stroke length, and motor/gearbox combination, the HPLA/HLE design has your application covered.

- **Rugged construction for heavy duty applications**
- **Thrust force capacity to 5455 N**

- **Standard travel up to 9 meters**
- **Velocity up to 5 meters/sec.**
- **Positional repeatability of ± 0.2 mm**
- **Timing belt and pulley drive mechanism for fast, accurate positioning**
- **Increased system stiffness due to larger belt width**
- **Low-maintenance sealed bearings**
- **Hollow-shaft input option for higher axial forces**
- **Steel-wheel or square-rail designs for normal load capacities up to 15 kN**
- **Quiet operation**
- **Corrosion-resistant option for harsh environments**
- **IP30 seal design**

Extensive Automation Solutions

HMI and Controllers

Superior integration and support for machine control as well as HMI hardware and software.

Grippers

Parallel, angular, and three jaw grippers are available in over 1,000 configurations.

www.parker.com/pneu/gripper

Variable Speed Drives

Motor speed control for AC induction and DC brush type to round out Parker's motion control solution.

www.parker.com/drives

Air Control Valves

Valve technology that meets the most demanding requirements in any industrial application.

www.parker.com/pneu/valve

Air Preparation

Parker, the industry leader in air preparation, offers a complete line of products to ensure clean, dry, oil-free air.

www.parker.com/pneu/airprep

Connectors and Tubing

The most complete line of fluid connectors worldwide will meet virtually any automation application.

www.parker.com/pneu/fc

Structural Automation

More than 150 metric and inch profiles, integral motion components, and accessories for unlimited and flexible configurations. Pre-machined kits or complete assemblies.

Gearhead Sizing/Selection

Stealth® Gearhead 9 Step Sizing/Selection Procedure

To properly select an appropriate gearhead for a specific application requires consideration of several interrelated parameters including:

- **Speed**
- **Continuous torque**
- **Repetitive peak torque or acceleration torque**
- **Emergency stop torque**
- **Duty cycle**
- **Ambient temperature**
- **Radial and axial shaft load**

The following 9 step procedure provides a quick, straightforward method for selecting a gearhead that will provide an L-10 life of 10,000 hours.

1) Load Parameters

Evaluate the following requirements of the load:

- Load inertia
- Acceleration time (t_{acc})
- Continuous run time (t_{cont})
- Deceleration time (t_{dec})
- Dwell time (t_{dwell})
- Maximum continuous speed (N_{cont})

From these, calculate:

- Acceleration torque (T_{acc})
- Continuous torque (T_{cont})
- Deceleration torque (T_{dec})
- Dwell torque (T_{dwell})*

*Although not used in the following torque calculations, torque requirements during dwell (zero speed) must be considered when selecting gearhead size.

2) Duty Cycle

Determine if the application duty cycle is **intermittent** or continuous by calculating the duty cycle as follows:

$$\text{Duty cycle} = (t_{acc} + t_{cont} + t_{dec} / t_{total}) \times 100\%$$

If the duty cycle is <60% and ($t_{acc} + t_{cont} + t_{dec}$) is less than 20 minutes, the motion is considered **intermittent**.

If the duty cycle is ≥60% and ($t_{acc} + t_{cont} + t_{dec}$) is greater than 20 minutes, the motion is considered **continuous**.

3) Calculate the Root Mean Cube Output Torque

$$T_{mean} = \sqrt[3]{\frac{(T_{acc}^3)(N_{cont})(t_{acc}) + (T_{cont}^3)(N_{cont})(t_{cont}) + (T_{dec}^3)(t_{dec})}{\frac{(N_{cont})(t_{acc}) + (N_{cont})(t_{cont}) + (N_{cont})(t_{dec})}{2}}}$$

The graph shows a step function for torque over time. The y-axis is labeled 'Torque' and the x-axis is labeled 'Time'. The torque is T_{acc} during acceleration time t_{acc} , T_{cont} during continuous run time t_{cont} , and T_{dec} during deceleration time t_{dec} . The dwell time t_{dwell} is shown as a zero-torque period. A break symbol (//) is shown on the x-axis between t_{dec} and t_{dwell} .

4) Select Gearhead Type and Size

Choose the gearhead type (PS, PX, etc) and frame size to match the motor frame size.

5) Check Selected Gearhead Size Ratings

Check the specifications of the gearhead selected and confirm that it meets the following criteria:

$$\text{Rated nominal torque } (T_{nom}) \geq T_{mean}$$

$$\text{Rated accel torque } (T_{acc r}) \geq T_{acc} \text{ or } T_{dec}$$

6) Determine Maximum Allowable Gearhead Ratio

Using the selected gearhead's listed specification for maximum rated speed (N_{maxr}), determine the maximum allowable ratio:

$$\text{Maximum ratio} = N_{maxr} / N_{cont}$$

7) Calculate the Mean and Maximum Input Speed

Choose a ratio for the selected gearhead (must be less than the maximum determined in Step 6). With this ratio, calculate the mean input speed ($N_{mean i}$) and the maximum input speed ($N_{max i}$):

$$N_{mean i} = \left(\frac{(N_{cont})(t_{acc}) + (N_{cont})(t_{cont}) + \frac{N_{cont}(t_{dec})}{2}}{t_{acc} + t_{cont} + t_{dec}} \right) (\text{ratio})$$

$$N_{max i} = (N_{cont}) (\text{ratio})$$

Note: Reflected inertia requirement may determine the actual ratio, as long as it does not exceed the maximum ratio value calculated in Step 6.

8) Determine Thermal (KT) and Shock (KS) Factor

Use the selected gearhead's specifications and the K Factor charts below to compensate for thermal and shock torque effects to comply with the following:

For continuous duty: $T_{nomr} > (T_{mean})(K_T)(K_S)$

For intermittent duty: $T_{nomr} > (T_{mean})(K_S)$

K_T Thermal Factor

This factor derates the transmitted torque to prevent case temperature from exceeding 100°C. The K_T values shown in the table below are for 25°C ambient temperature, medium-size indoor space, with the gearheads mounted to a metal base with a surface area more than 3 times larger than the gearhead surface area.

K_S Shock Factor

This factor is used to derate the transmitted torque when the application is not well defined, has random duty cycles or experiences varying peak torques subjecting the gear teeth to torques above the estimated torques. K_S factor values are shown below for three general application categories. K_S values are independent of gearhead size. If your application does not fit into one of these categories, contact Parker to discuss your requirements.

9) Confirm Selection

Using the selected gearhead's listed specifications and the calculations from the previous steps, check that the following criteria are met:

- T_{accr} must be greater than the larger of T_{acc} or T_{dec}
- Check the emergency stop torque rating
- N_{nomr} must be greater than $N_{mean i}$
- N_{maxr} must be greater than $N_{max i}$
- Verify radial and axial shaft load

If any of the above comparisons are not met, then:

- Choose a larger gearhead
- Reevaluate the ratio
- Reevaluate the torque
- Reevaluate the speed
- Reevaluate the duty cycle
- Reevaluate shaft load

K_S Shock Factor

Load Type	Application	K_S
Known Load Data	All Industries	1.00
Unknown Load Data – Light	Textiles, liquid mixers, can filling, food, conveyors, plastics, fans	1.25
Unknown Load Data – Moderate	Paper mills, rubber industry, sugar industry, metal mills, lumber, robotics	1.50
